

6 ESSENTIALS TO BE SAFE ONLINE

As a business enabler, cybersecurity should not be an afterthought. Especially since cyber-attacks are **no longer a matter of if, but when** – even for SMEs. Strengthen your organisation's cyber defence now by adopting these 6 Essentials from the Cyber Security Agency of Singapore.

ESSENTIAL

1 Know Your Assets

Identify and understand the cyber components of your organisation, so as to prevent and detect unauthorised access to those assets.

ESSENTIAL

2 Allow Only Authorised Software To Work

Implement application control integrated with antivirus, so as to allow only authorised software to work.

ESSENTIAL

3 Timely Patching and Updating

Patch and update your operating systems, firmware and applications in a timely manner to reduce system known vulnerabilities thereby minimising exploitative attacks.

ESSENTIAL

6 Access Control

Ensure authorised access only, by implementing multifactor authentication.

ESSENTIAL

5 Detect Breaches Promptly

Detect breaches as soon as possible by setting up continuous monitoring with enabled audit trails/security logging.

ESSENTIAL

4 Giving The Right Admin 'Passes'

Restrict administrator privileges so as not to give attackers privileged rights to compromise systems.
