

CYBER TIP: ENABLE 2FA AND USE STRONG PASSPHRASES

How you can strengthen your account security:

- **Enable 2FA for your online accounts.**
2FA can be a One-Time Password (OTP) from a digital token or SMS that is sent to your mobile devices.

- **Create a strong passphrase. Here's how:**

- 1: String together five different words that relate to a memory unique to you.
- 2: Use a mix of upper- and lower-case letters, numbers or symbols to make at least 12 characters.

- **Use a reputable password manager.**
Store and manage your multiple passphrases for different accounts.
