

USE STRONG PASSPHRASES AND ENABLE 2FA

Secure your online accounts just like you lock the gate and door to keep the burglars out!

Use strong Passphrases as the door lock

- Create a strong password:

STEP 1: Use five different words that relate to a memory that is unique to you to create a passphrase.

STEP 2: Use uppercase and lowercase letters, numbers, and symbols to make at least 12 characters.

e.g. LearnttoRIDEabikeat5!

- Use different passphrases for your online accounts

Enable TWO-factor Authentication (2FA) as the gate lock

- 2FA adds an extra layer of security

Even if someone cracks your password, they still cannot access your account without the second factor.

- 2FA can be:

- One-Time Password (OTP) from a digital token or SMS on your mobile device.
- Biometrics like fingerprint or facial recognition.

or

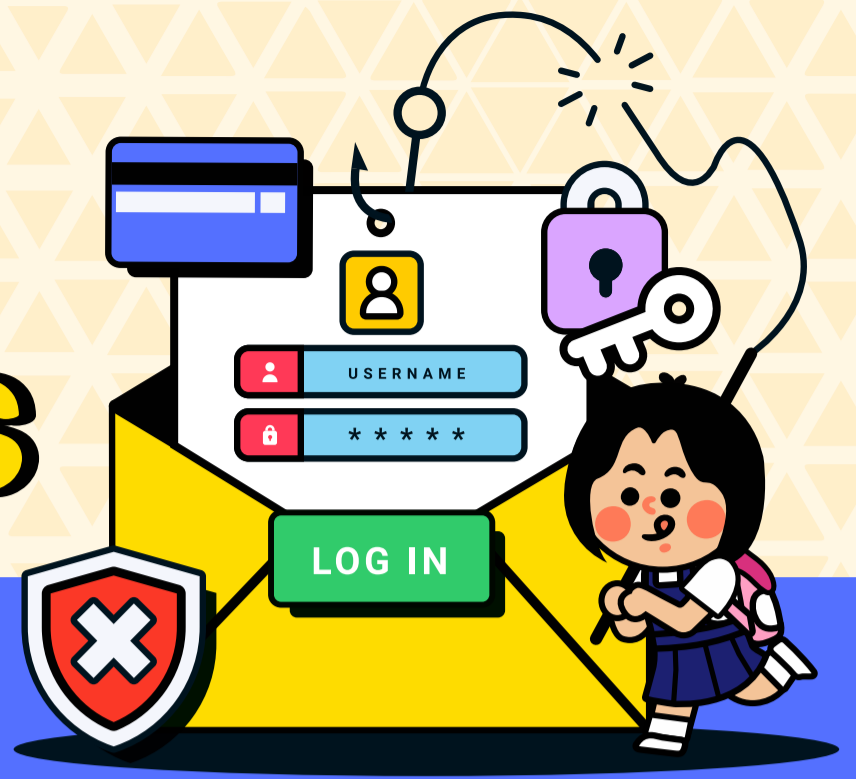

something you know
(Password)

something you have
(OTP from a 2FA token)

something you are
(Biometrics *e.g. fingerprint,*
facial recognition)

BEWARE OF PHISHING SCAMS

Learn to spot the **6 signs of phishing** to avoid being tricked by cybercriminals!

Mismatched and misleading information

Use of urgent or threatening language

Promises of attractive rewards

Requests for personal information

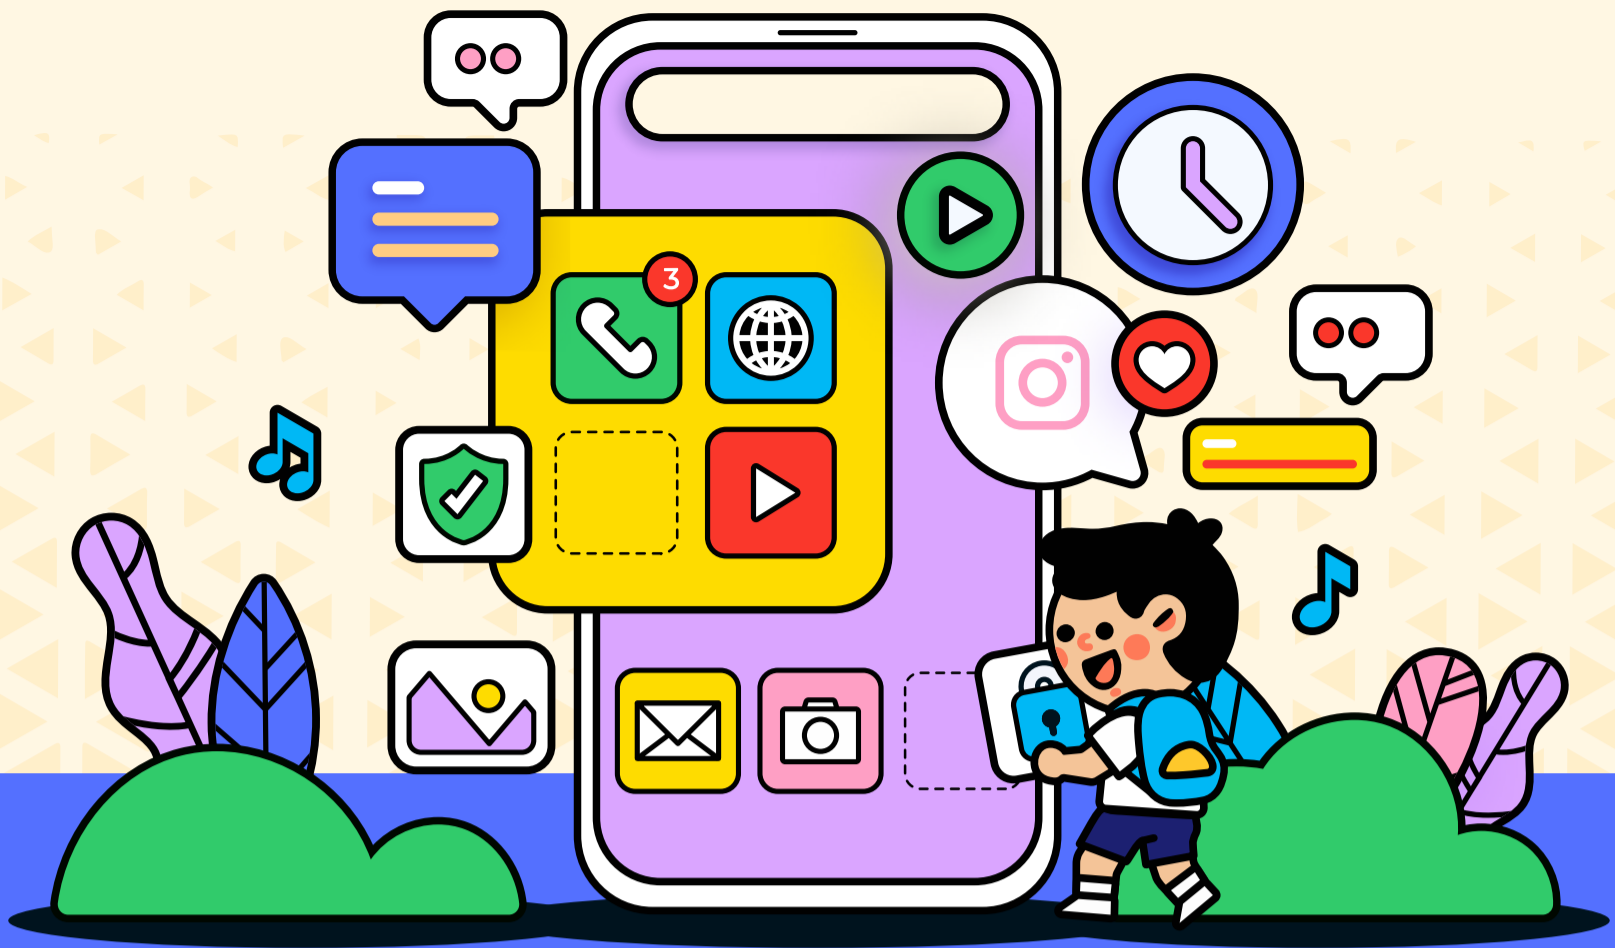

Unexpected emails or messages

Suspicious attachments

Remember:

- Do not open any attachment or click on any links that look suspicious.
- Do not provide any personal information or banking details.

ADD SCAMSHIELD AND ANTI-VIRUS APPS

Protect your devices from malware infection by not clicking on unknown links or downloading unknown files from the Internet!

Add the ScamShield app to detect scam messages and block scam calls.

Install anti-virus apps which can detect malware and malicious phishing links.

Only use official app stores such as Google Play Store (Android) or Apple App Store (iOS).

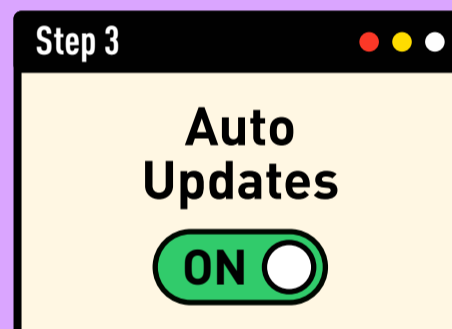

For a list of recommended anti-virus apps, visit www.csa.gov.sg.

UPDATE SOFTWARE PROMPTLY

Protect your devices from bugs and security flaws by updating software promptly!

Enable automatic updates over Wi-Fi or schedule updates to install overnight when your device is plugged in.

Regularly check your apps and remove those that are not needed.

Remember, putting off software updates could make your devices more vulnerable to security threats and cyberattacks.
